[563] JunleiTennyson (Female): "You've returned - and in one piece. Color me impressed."
[25] JunleiTennyson (Female): "Captain. What can I do for you?"
[32] Player: "I got the parts for the radiators. What now?"
[594] JunleiTennyson (Female): "Good work."
[33] JunleiTennyson (Female): "I'll take those. I need you to head through the large door at the far end of engineering. Take the elevator down into the machinery shaft."
[34] JunleiTennyson (Female): "There's a terminal in the back. Activate it when I call over the ship's PA. And bring weapons. There's a slight mantipillar infestation."
[36] Player: "I'll make my way down there."
[239] Player: "Define "slight.""
[35] Player: "I got your parts, why do I have to go to some maintenance shaft?"
[243] JunleiTennyson (Female): "More than a few. Less than a hive. Nothing you can't handle."
[37] JunleiTennyson (Female): "If every repair was a one-woman job, I wouldn't need an engineering team. As it is, my staff is busy keeping the station from melting down."
[244] JunleiTennyson (Female): "We were salvaging parts from a ship. Turned out there were eggs inside. They got into the radiators, and here we are."
[236] JunleiTennyson (Female): "You can flip a switch for me, but you can't install these parts. Not quickly at least. Not on the first try. Able though you've proven to be."
