Introduction

The 2nd workshop on Life-long Learning for Spoken Language Systems covers challenges in a lifelong process of a natural language system, where new users or functionalities are added, and existing functionalities are modified. Improving such systems often require updating training data, and statistical models to account for data distribution shifts. This workshop will be co-located with AACL 2020 and will be held online.

This year we received six submissions for the main workshop track and accepted three of them. We would like to thank the Program Committee members who reviewed the papers and provided valuable feedback. We would also like to thank the workshop participants.

William M. Campbell, Alex Waibel, Dilek Hakkani-Tur, Timothy J. Hazen, Kevin Kilgour, Eunah Cho, Varun Kumar, Hadrien Glaude

Workshop Organizers
Organizers:
William M. Campbell, Alexa AI, Amazon
Alex Waibel, Carnegie Mellon University/Karlsruhe Institute of Technology
Dilek Hakkani-Tur, Alexa AI, Amazon
Timothy J. Hazen, Twitter
Kevin Kilgour, Google Research
Eunah Cho, Alexa AI, Amazon
Varun Kumar, Alexa AI, Amazon
Hadrien Glaude, Alexa AI, Amazon

Program Committee:
Jan Niehues, Maastricht University
Elizabeth Salesky, CMU
Christian Federmann, Microsoft
Abhyuday Jagannatha, UMass Amherst
Beat Gfeller, Google Research
Ankur Gandhe, Alexa Speech
Hassan Rom, Google Research
Matthias Sperber, Apple
John Lalor, University of Notre Dame
Teresa Herrmann, Echobot Media Technologies GmbH/Karlsruhe Institute of Technology
Varun Nagaraja, Alexa Speech
Nick Ruiz, Interactions LLC
Krishna C. Puvvada, Alexa Speech
Jervis Pinto, Electronic Arts
Harsha Sundar, Alexa Speech
Stan Peshterliev, Facebook
Abhishek Sethi, Google
Aditya Siddhant, Google
# Table of Contents

*Deep Active Learning for Sequence Labeling Based on Diversity and Uncertainty in Gradient*
  Yekyung Kim .......................................................... 1

*Supervised Adaptation of Sequence-to-Sequence Speech Recognition Systems using Batch-Weighting*
  Christian Huber, Juan Hussain, Tuan-Nam Nguyen, Kaihang Song, Sebastian Stüker and Alexander Waibel .......................................................... 9

*Data Augmentation using Pre-trained Transformer Models*
  Varun Kumar, Ashutosh Choudhary and Eunah Cho .................................................. 18
