#### Responsible NLP Checklist

Paper title: SLiNT: Structure-aware Language Model with Injection and Contrastive Training for Knowledge Graph Completion

Authors: mengxue yang, Chun Yang, Jiaqi Zhu, Jiafan Li, Jingqi Zhang, Yuyang Li, Ying Li

How to read the checklist symbols:	
the authors responded 'yes'	
the authors responded 'no'	
N/A the authors indicated that the question does not apply to their work	
the authors did not respond to the checkbox question	
For background on the checklist and guidance provided to the authors, see the Responsible NLP Checklist page at ACL Rolling Review.	

## ✓ A. Questions mandatory for all submissions.

- A1. Did you describe the limitations of your work? *This paper has a Limitations section.*
- A2. Did you discuss any potential risks of your work? *limitation,Ethical Consideration*
- **☑** B. Did you use or create scientific artifacts? (e.g. code, datasets, models)

contain personally identifying information or offensive content.

☑ B1. Did you cite the creators of artifacts you used? section 4,Appendix B,Appendix C

necessary.

- ☑ B2. Did you discuss the license or terms for use and/or distribution of any artifacts? *Appendix C*
- B3. Did you discuss if your use of existing artifact(s) was consistent with their intended use, provided that it was specified? For the artifacts you create, do you specify intended use and whether that is compatible with the original access conditions (in particular, derivatives of data accessed for research purposes should not be used outside of research contexts)?

  because we only relied on well-established public benchmark datasets (FB15k-237, WN18RR) whose intended use is already well documented and restricted to research, so further discussion was not
- B4. Did you discuss the steps taken to check whether the data that was collected/used contains any information that names or uniquely identifies individual people or offensive content, and the steps taken to protect/anonymize it?

  because all datasets used (e.g., FB15k-237, WN18RR) are standard public benchmarks that do not
- B5. Did you provide documentation of the artifacts, e.g., coverage of domains, languages, and linguistic phenomena, demographic groups represented, etc.?

  because we only used well-established public benchmark datasets (FB15k-237 and WN18RR), which already come with thorough documentation, so additional documentation was not necessary.

☑ B6. Did you report relevant statistics like the number of examples, details of train/test/dev splits, etc. for the data that you used/created? *section4.5,Appendix B* 

### ☑ C. Did you run computational experiments?

- ✓ C1. Did you report the number of parameters in the models used, the total computational budget (e.g., GPU hours), and computing infrastructure used? section4.2,Appendix A.2,Appendix C
- ✓ C2. Did you discuss the experimental setup, including hyperparameter search and best-found hyperparameter values? section 4.1, section 4.6
- ☑ C3. Did you report descriptive statistics about your results (e.g., error bars around results, summary statistics from sets of experiments), and is it transparent whether you are reporting the max, mean, etc. or just a single run?

  section4.3, section4,4, section4,5
- C4. If you used existing packages (e.g., for preprocessing, for normalization, or for evaluation, such as NLTK, SpaCy, ROUGE, etc.), did you report the implementation, model, and parameter settings used?

  section 4.2, section 4.3

### D. Did you use human annotators (e.g., crowdworkers) or research with human subjects?

- D1. Did you report the full text of instructions given to participants, including e.g., screenshots, disclaimers of any risks to participants or annotators, etc.?

  Our study did not involve human participants or annotation tasks, so no instructions were provided.
- D2. Did you report information about how you recruited (e.g., crowdsourcing platform, students) and paid participants, and discuss if such payment is adequate given the participants' demographic (e.g., country of residence)?
  - We relied solely on publicly available benchmark datasets (FB15k-237, WN18RR) and did not recruit or compensate any participants.
- D3. Did you discuss whether and how consent was obtained from people whose data you're using/curating (e.g., did your instructions explain how the data would be used)?

  All datasets used are standard public benchmarks released for research purposes, so no additional consent procedures were necessary.
- ▶ D4. Was the data collection protocol approved (or determined exempt) by an ethics review board? As the study only used publicly available benchmark datasets and did not involve new data collection or human subjects, ethics approval was not required.
- D5. Did you report the basic demographic and geographic characteristics of the annotator population that is the source of the data?

  The study did not involve human annotators, since all data came from existing public benchmark datasets.

# **E.** Did you use AI assistants (e.g., ChatGPT, Copilot) in your research, coding, or writing?

☑ E1. If you used AI assistants, did you include information about their use?

We used AI assistants (e.g., ChatGPT) only for language polishing. All research ideas, methods, models, experiments, and code implementations were entirely developed and conducted by the authors.
