

## Responsible NLP Checklist

Paper title: *Distributional Clarity: The Hidden Driver of RL-Friendliness in Large Language Models*  
Authors: *Shaoning Sun, Mingzhu Cai, Huang He, Bingjin Chen, Siqu Bao, Yujiu Yang, Hua Wu, Haifeng Wang*

How to read the checklist symbols:

- the authors responded 'yes'
- the authors responded 'no'
- N/A the authors indicated that the question does not apply to their work
- the authors did not respond to the checkbox question

For background on the checklist and guidance provided to the authors, see the [Responsible NLP Checklist](#) page at ACL Rolling Review.

---

### A. Questions mandatory for all submissions.

#### A1. Did you describe the limitations of your work?

*This paper has a Limitations section.*

#### A2. Did you discuss any potential risks of your work?

*This work focuses on mathematical reasoning tasks using standard open-weight models and public benchmarks. We do not foresee immediate ethical risks or negative societal impacts.*

### B. Did you use or create scientific artifacts? (e.g. code, datasets, models)

#### B4. Did you discuss the steps taken to check whether the data that was collected/used contains any information that names or uniquely identifies individual people or offensive content, and the steps taken to protect/anonymize it?

*The datasets used (AIME, MATH, etc.) are standard mathematical benchmarks containing public competition problems and do not contain personally identifiable information or offensive content.*

#### B6. Did you report relevant statistics like the number of examples, details of train/test/dev splits, etc. for the data that you used/created?

*Relevant statistics for the datasets and sampling budgets are reported in Section 4.1 and Appendix C.*

### C. Did you run computational experiments?

#### C2. Did you discuss the experimental setup, including hyperparameter search and best-found hyperparameter values?

*Detailed experimental setups, including hyperparameters for the DAPO algorithm and computing resources, are provided in Section 4.1 and Appendix C.*

#### C3. Did you report descriptive statistics about your results (e.g., error bars around results, summary statistics from sets of experiments), and is it transparent whether you are reporting the max, mean, etc. or just a single run?

*We report average results across multiple samples (e.g., avg@256) as detailed in Section 4 and Appendix C.*

---

*The Responsible NLP Checklist used at ACL Rolling Review is adopted from NAACL 2022, with the addition of ACL 2023 question on AI writing assistance and further refinements based on ARR practice. ACL 2026 used a subset of ARR checklist form.*

**D. Did you use human annotators (e.g., crowdworkers) or research with human subjects?**

D1. Did you report the full text of instructions given to participants, including e.g., screenshots, disclaimers of any risks to participants or annotators, etc.?  
*(left blank)*

D2. Did you report information about how you recruited (e.g., crowdsourcing platform, students) and paid participants, and discuss if such payment is adequate given the participants' demographic (e.g., country of residence)?  
*(left blank)*

D3. Did you discuss whether and how consent was obtained from people whose data you're using/curating (e.g., did your instructions explain how the data would be used)?  
*(left blank)*

D4. Was the data collection protocol approved (or determined exempt) by an ethics review board?  
*(left blank)*

**E. Did you use AI assistants (e.g., ChatGPT, Copilot) in your research, coding, or writing?**

E1. If you used AI assistants, did you include information about their use?  
*In this work, we utilize large language models (LLMs) to assist in checking grammatical errors, performing sentence-level refinement, and verifying formula correctness. All technical contributions, ideas, and claims are proposed by the author without the assistance of LLMs.*
