

Responsible NLP Checklist

Paper title: *EpiCaR: Knowing What You Don't Know Matters for Better Reasoning in LLMs*

Authors: *Jewon Yeom, Jaewon Sok, Seonghyeon Park, Jeongjae Park, Taesup Kim*

How to read the checklist symbols:

- the authors responded 'yes'
- the authors responded 'no'
- the authors indicated that the question does not apply to their work
- the authors did not respond to the checkbox question

For background on the checklist and guidance provided to the authors, see the [Responsible NLP Checklist](#) page at ACL Rolling Review.

A. Questions mandatory for all submissions.

- A1. Did you describe the limitations of your work?

This paper has a Limitations section.

- A2. Did you discuss any potential risks of your work?

Potential risks are discussed in the "Ethical Considerations" section, specifically regarding "Misuse and Over-reliance" and "Bias Amplification".

B. Did you use or create scientific artifacts? (e.g. code, datasets, models)

- B4. Did you discuss the steps taken to check whether the data that was collected/used contains any information that names or uniquely identifies individual people or offensive content, and the steps taken to protect/anonymize it?

The study uses standard, public mathematical and code generation benchmarks (MATH, GSM8K, MBPP) which do not typically contain personally identifying information or offensive content.

- B6. Did you report relevant statistics like the number of examples, details of train/test/dev splits, etc. for the data that you used/created?

Section 5 and Appendix B.2 detail the splits, such as using the MATH training split of 12,500 problems and a 500-instance split-validation set.

C. Did you run computational experiments?

- C2. Did you discuss the experimental setup, including hyperparameter search and best-found hyperparameter values?

Detailed hyperparameters for the Dual-Objective Iterative SFT (such as learning rate, batch size, and LoRA parameters) are provided in Appendix B.5, Table 10.

- C3. Did you report descriptive statistics about your results (e.g., error bars around results, summary statistics from sets of experiments), and is it transparent whether you are reporting the max, mean, etc. or just a single run?

Appendix M.1 reports the mean and standard deviation for AUROC and ECE metrics in the Prompt Sensitivity Analysis (Table 16).

The Responsible NLP Checklist used at ACL Rolling Review is adopted from NAACL 2022, with the addition of ACL 2023 question on AI writing assistance and further refinements based on ARR practice. ACL 2026 used a subset of ARR checklist form.

D. Did you use human annotators (e.g., crowdworkers) or research with human subjects?

D1. Did you report the full text of instructions given to participants, including e.g., screenshots, disclaimers of any risks to participants or annotators, etc.?

(left blank)

D2. Did you report information about how you recruited (e.g., crowdsourcing platform, students) and paid participants, and discuss if such payment is adequate given the participants' demographic (e.g., country of residence)?

(left blank)

D3. Did you discuss whether and how consent was obtained from people whose data you're using/curating (e.g., did your instructions explain how the data would be used)?

(left blank)

D4. Was the data collection protocol approved (or determined exempt) by an ethics review board?

(left blank)

E. Did you use AI assistants (e.g., ChatGPT, Copilot) in your research, coding, or writing?

E1. If you used AI assistants, did you include information about their use?

The "Use of AI Assistants" section acknowledges the use of Gemini 3 Pro to assist with code debugging and writing polishing, in accordance with the ACL Policy.
