

Responsible NLP Checklist

Paper title: *Think before Go: Hierarchical Reasoning for Image-goal Navigation*

Authors: *Pengna Li, Kangyi Wu, Shaoqing Xu, Fang Li, Lin Zhao, Long Chen, Zhi-Xin Yang, Nanning Zheng*

How to read the checklist symbols:

- the authors responded 'yes'
- the authors responded 'no'
- the authors indicated that the question does not apply to their work
- the authors did not respond to the checkbox question

For background on the checklist and guidance provided to the authors, see the [Responsible NLP Checklist](#) page at ACL Rolling Review.

A. Questions mandatory for all submissions.

- A1. Did you describe the limitations of your work?

This paper has a Limitations section.

- A2. Did you discuss any potential risks of your work?

Appendix A.1

B. Did you use or create scientific artifacts? (e.g. code, datasets, models)

- B4. Did you discuss the steps taken to check whether the data that was collected/used contains any information that names or uniquely identifies individual people or offensive content, and the steps taken to protect/anonymize it?

Appendix A.2

- B6. Did you report relevant statistics like the number of examples, details of train/test/dev splits, etc. for the data that you used/created?

Privately revealed to ACL ARR 2026 January Program Chairs, ACL ARR 2026 January Submission3180 Area Chairs, ACL ARR 2026 January Submission3180 Authors, ACL ARR 2026 January Submission3180 Reviewers, ACL ARR 2026 January Submission3180 Senior Area Chairs Section 3.2, Section 4, Appendix Section C.2

C. Did you run computational experiments?

- C2. Did you discuss the experimental setup, including hyperparameter search and best-found hyperparameter values?

Section 4.1, Appendix Section C.3, Section D.2

- C3. Did you report descriptive statistics about your results (e.g., error bars around results, summary statistics from sets of experiments), and is it transparent whether you are reporting the max, mean, etc. or just a single run?

Section 4.1

The Responsible NLP Checklist used at ACL Rolling Review is adopted from NAACL 2022, with the addition of ACL 2023 question on AI writing assistance and further refinements based on ARR practice. ACL 2026 used a subset of ARR checklist form.

D. Did you use human annotators (e.g., crowdworkers) or research with human subjects?

D1. Did you report the full text of instructions given to participants, including e.g., screenshots, disclaimers of any risks to participants or annotators, etc.?

Our work does not involve human participants or crowd annotators. The hierarchical reasoning dataset is constructed via automated prompting of large models.

D2. Did you report information about how you recruited (e.g., crowdsourcing platform, students) and paid participants, and discuss if such payment is adequate given the participants' demographic (e.g., country of residence)?

We don't have recruited any human annotators. Our collected dataset is constructed via automated prompting of large models.

D3. Did you discuss whether and how consent was obtained from people whose data you're using/curating (e.g., did your instructions explain how the data would be used)?

Appendix A.3

D4. Was the data collection protocol approved (or determined exempt) by an ethics review board?

We only use existing datasets obtained with official permission under their licenses/terms of use, and our real-world demonstrations are conducted by the authors in controlled environments without recording identifiable personal information. Therefore, an ethics review board approval was not sought for data collection in this work.

E. Did you use AI assistants (e.g., ChatGPT, Copilot) in your research, coding, or writing?

E1. If you used AI assistants, did you include information about their use?

Appendix Section A.4
