

Responsible NLP Checklist

Paper title: *Temporal Precision Matters: Brain-Tuning Speech Language Models with Millisecond-Resolution Neural Signals*

Authors: *Zhejun Zhang, Wenqing Zhou, Haozhe Xu, Lin Zhang, Lei Li*

How to read the checklist symbols:

- the authors responded 'yes'
- the authors responded 'no'
- N/A the authors indicated that the question does not apply to their work
- the authors did not respond to the checkbox question

For background on the checklist and guidance provided to the authors, see the [Responsible NLP Checklist](#) page at ACL Rolling Review.

A. Questions mandatory for all submissions.

- A1. Did you describe the limitations of your work?

This paper has a Limitations section.

- N/A A2. Did you discuss any potential risks of your work?

(left blank)

B. Did you use or create scientific artifacts? (e.g. code, datasets, models)

- B4. Did you discuss the steps taken to check whether the data that was collected/used contains any information that names or uniquely identifies individual people or offensive content, and the steps taken to protect/anonymize it?

The dataset is publicly available on OpenNeuro (CC0 license). All data have been de-identified with anonymized anatomical scans. See Appendix E.

- B6. Did you report relevant statistics like the number of examples, details of train/test/dev splits, etc. for the data that you used/created?

Section 3.2, Section 3.3.3, Appendix A.2

C. Did you run computational experiments?

- C2. Did you discuss the experimental setup, including hyperparameter search and best-found hyperparameter values?

Section 3.3.3, Appendix B.1, Appendix B.2

- C3. Did you report descriptive statistics about your results (e.g., error bars around results, summary statistics from sets of experiments), and is it transparent whether you are reporting the max, mean, etc. or just a single run?

Section 4, Appendix D

D. Did you use human annotators (e.g., crowdworkers) or research with human subjects?

- N/A D1. Did you report the full text of instructions given to participants, including e.g., screenshots, disclaimers of any risks to participants or annotators, etc.?

We use the publicly available Podcast ECoG dataset (Zada et al., 2025) and did not conduct additional data collection.

The [Responsible NLP Checklist](#) used at ACL Rolling Review is adopted from [NAACL 2022](#), with the addition of [ACL 2023 question on AI writing assistance](#) and further refinements based on ARR practice. [ACL 2026](#) used a subset of ARR checklist form.

N/A D2. Did you report information about how you recruited (e.g., crowdsourcing platform, students) and paid participants, and discuss if such payment is adequate given the participants' demographic (e.g., country of residence)?

We did not recruit additional participants.

D3. Did you discuss whether and how consent was obtained from people whose data you're using/curating (e.g., did your instructions explain how the data would be used)?

The dataset is publicly available on OpenNEURO platform. This matter has been discussed in Appendix E (Data Availability and Ethics).

D4. Was the data collection protocol approved (or determined exempt) by an ethics review board?

We did not conduct new human subjects research; the original dataset was collected under IRB approval. See Appendix E.2.

E. Did you use AI assistants (e.g., ChatGPT, Copilot) in your research, coding, or writing?

E1. If you used AI assistants, did you include information about their use?

We used AI assistants (e.g., ChatGPT, Grammarly) for limited support in English grammar checking and stylistic polishing of the manuscript text. All scientific contributions are entirely the work of the human authors. No AI-generated content was used in the formulation of ideas, code development, or production of figures and tables.
