

Responsible NLP Checklist

Paper title: *Rational Synthesizers or Heuristic Followers? Analyzing LLMs in RAG-based Question-Answering*

Authors: *Atharv Naphade*

How to read the checklist symbols:

- ☒ the authors responded 'yes'
- ☒ the authors responded 'no'
- ☒ the authors indicated that the question does not apply to their work
- ☐ the authors did not respond to the checkbox question

For background on the checklist and guidance provided to the authors, see the [Responsible NLP Checklist](#) page at ACL Rolling Review.

☒ A. Questions mandatory for all submissions.

☒ A1. Did you describe the limitations of your work?

This paper has a Limitations section.

☒ A2. Did you discuss any potential risks of your work?

Findings of Illusory truth could be used adversarially in Retrieval systems to degrade performance, though I provide potential ways to prevent this.

☒ B. Did you use or create scientific artifacts? (e.g. code, datasets, models)

☒ B4. Did you discuss the steps taken to check whether the data that was collected/used contains any information that names or uniquely identifies individual people or offensive content, and the steps taken to protect/anonymize it?

Used standard methods to sanitize data before use

☒ B6. Did you report relevant statistics like the number of examples, details of train/test/dev splits, etc. for the data that you used/created?

3.1

☒ C. Did you run computational experiments?

☒ C2. Did you discuss the experimental setup, including hyperparameter search and best-found hyperparameter values?

We were doing interpretability experiments, so there was no optimal hyperparameters to be found. We disclose whichever standard hyperparameters we use.

☒ C3. Did you report descriptive statistics about your results (e.g., error bars around results, summary statistics from sets of experiments), and is it transparent whether you are reporting the max, mean, etc. or just a single run?

4

☒ D. Did you use human annotators (e.g., crowdworkers) or research with human subjects?

☒ D1. Did you report the full text of instructions given to participants, including e.g., screenshots, disclaimers of any risks to participants or annotators, etc.?

8

The [Responsible NLP Checklist](#) used at ACL Rolling Review is adopted from [NAACL 2022](#), with the addition of [ACL 2023 question on AI writing assistance](#) and further refinements based on ARR practice. [ACL 2026](#) used a subset of ARR checklist form.

- ☒ D2. Did you report information about how you recruited (e.g., crowdsourcing platform, students) and paid participants, and discuss if such payment is adequate given the participants' demographic (e.g., country of residence)?

8

- ☒ D3. Did you discuss whether and how consent was obtained from people whose data you're using/curating (e.g., did your instructions explain how the data would be used)?

8

- ☒ D4. Was the data collection protocol approved (or determined exempt) by an ethics review board?
We determined this small data labeling process aided by researcher colleagues did not require IRB review, as it involved no collection of personal data, no intervention with human subjects, and posed minimal risk to participants.

- ☒ **E. Did you use AI assistants (e.g., ChatGPT, Copilot) in your research, coding, or writing?**

- ☒ E1. If you used AI assistants, did you include information about their use?
