

Responsible NLP Checklist

Paper title: *SCMAPR: Self-Correcting Multi-Agent Prompt Refinement for Complex-Scenario Text-to-Video Generation*

Authors: *Chengyi Yang, Pengzhen Li, Jiayin Qi, Aimin Zhou, Ji Wu, Ji Liu*

How to read the checklist symbols:

- the authors responded 'yes'
- the authors responded 'no'
- N/A* the authors indicated that the question does not apply to their work
- the authors did not respond to the checkbox question

For background on the checklist and guidance provided to the authors, see the [Responsible NLP Checklist](#) page at ACL Rolling Review.

A. Questions mandatory for all submissions.

- A1. Did you describe the limitations of your work?

This paper has a Limitations section.

- A2. Did you discuss any potential risks of your work?

Ethical Considerations

B. Did you use or create scientific artifacts? (e.g. code, datasets, models)

- B4. Did you discuss the steps taken to check whether the data that was collected/used contains any information that names or uniquely identifies individual people or offensive content, and the steps taken to protect/anonymize it?

Ethical Considerations

- B6. Did you report relevant statistics like the number of examples, details of train/test/dev splits, etc. for the data that you used/created?

4 T2V-Complexity Benchmark

C. Did you run computational experiments?

- C2. Did you discuss the experimental setup, including hyperparameter search and best-found hyperparameter values?

Appendix D.3 Analysis on Efficiency of Conditional Revision

- C3. Did you report descriptive statistics about your results (e.g., error bars around results, summary statistics from sets of experiments), and is it transparent whether you are reporting the max, mean, etc. or just a single run?

5.1 Experimental Setup

D. Did you use human annotators (e.g., crowdworkers) or research with human subjects?

- N/A* D1. Did you report the full text of instructions given to participants, including e.g., screenshots, disclaimers of any risks to participants or annotators, etc.?

(left blank)

The Responsible NLP Checklist used at ACL Rolling Review is adopted from NAACL 2022, with the addition of ACL 2023 question on AI writing assistance and further refinements based on ARR practice. ACL 2026 used a subset of ARR checklist form.

N/A D2. Did you report information about how you recruited (e.g., crowdsourcing platform, students) and paid participants, and discuss if such payment is adequate given the participants' demographic (e.g., country of residence)?
(left blank)

N/A D3. Did you discuss whether and how consent was obtained from people whose data you're using/curating (e.g., did your instructions explain how the data would be used)?
The three existing datasets used in this work are open-source benchmarks, and we follow their original licenses. T2V-Complexity was collected and curated by the authors for research purposes and does not involve private data from individual users. We manually inspected each benchmark item to ensure that it does not contain any information that names or uniquely identifies individual people. Therefore, individual consent is not applicable in this work.

N/A D4. Was the data collection protocol approved (or determined exempt) by an ethics review board?
No ethics review board approval was required, because our data collection does not involve human-subject data or personally identifiable information. The three existing datasets are open-source benchmarks, and T2V-Complexity was collected and curated by the authors for research purposes. We manually inspected each benchmark item to ensure that it does not contain any information that names or uniquely identifies individual people.

E. Did you use AI assistants (e.g., ChatGPT, Copilot) in your research, coding, or writing?

E1. If you used AI assistants, did you include information about their use?

5.1 Experimental Setup (In our experiments, we adopt DeepSeek-V3.2 to construct multiple agents.)
